The Learning Analytics Suite Student Academic Mentoring Portal

ANALYTICS FOR LEARNING

Providing access to structured learning analytics data allows students to gain a much greater understanding of their educational needs, promotes self-regulated learning, and encourage students to become self-regulated learners.

The Student Academic Mentoring Portal within the Learning Analytics Suite supports the academic mentoring process and allows students to access real-time analytical data about their learning and engagement, reflect upon past academic performance, and set academic goals, personal goals, and learning strategies for the year ahead.

STUDENT GOALS AND REFLECTION

A key area of the Student Academic Mentoring Portal is the 'My Goals' section which allows students to set long term goals, short term (semester based) academic and co-curricula goals (including strategies to achieve those goals), and reflect upon the success of past goals and strategies.

Customisable for each Year Level and run cyclically, the Goals and Reflection process helps students focus on their learning pathway and provides school leaders and teachers with a valuable source of data which can be used to modify school processes and classroom practice.
